Evidence-Based Public Health: Finding and Appraising Relevant Resources

Nancy Allee, Kristine Alpi, Hathy Simpson Medical Library Association Continuing Education Course May 22, 2010

Today's Agenda

- Part I
 - Introductions (1:00 1:10 pm NA)
 - Overview of Evidence Based Public Health (1:10 1:20 pm NA)
 - Resources Part I (1:20 2:00 pm NA)
 - Critical Appraisal Part I (2:00 2:20 pm KA)
 - Case Studies/Sample Searches Part I (2:20 2:50 pm ALL)
- BREAK (2:50 3:00 pm)

Today's Agenda, cont'd

- Part II
 - Resources Part II (3:00 3:40 pm HS)
 - Case Studies/Sample Searches Part II (3:40 4:10 pm ALL)
 - Critical Appraisal Part II (4:10 4:50 pm KA)
 - Wrap-up & Evaluation (4:50 5:00 pm HS)

Introductions

Objectives

- Understand the characteristics of evidencebased public health
- Be informed about the variety of resources available
- Know how to assess public health questions and respond to them effectively with freely available resources.
- Identify types of evidence and methods for appraising the public health literature

Course Overview

- What is Evidence-Based Public Health (EBPH)?
- Why is EBPH important?
- What is the difference between public health practice & medical practice?
- What can be used as evidence for making informed public health decisions?

Overview of Evidence Based Public Health

The Evidence-Based Movement EBM \rightarrow EBPH

How does public health relate to medicine?

<u>Medicine</u>

- •Focus on individuals
- •Diagnosis & treatment
- Clinical interventions
- •Well-established profession, standardized education & certification
- •Clinical sciences integral; social sciences less emphasized
- •Experimental studies with control groups: RCTs.

Public Health

- •Focus on populations
- •Prevention & health promotion
- •Environment & human behavior interventions
- •Diverse workforce, variable education & certifications
- Social sciences integral;
 clinical sciences peripheral to education
- •Observational studies: case control & cohort studies

10 Essential Services of Public Health

Public Health Functions Project, U.S. Dept. of Health and Human Services

What are the Knowledge Domains of Public Health?

- The field of public health is very broad and diverse
- There are multiple disciplines (knowledge domains) within the field of public health

The Knowledge Domains of Public Health

- Biostatistics
- Chronic Diseases
- Communicable Diseases
- Community Health
- Disaster Control & Emergency Services
- Environmental Health
- Epidemiology
- General Public Health
- Global Health
- Health Promotion & Education

- Health Services Administration
- HIV/AIDS
- Maternal & Child Health
- Nutrition
- Occupational Health
- Public Health Informatics
- Public Health Laboratory
 Sciences
- Public Health Nursing
- Social & Behavioral Sciences
- Vital Statistics & Surveillance

Public Health is Multidisciplinary

•Epidemiologists Statisticians Environmental Engineers Animal Control Officers •Sanitarians Food Scientists Industrial Hygienists Health Care Administrators •Health Economists Politicians Social Workers •Veterinarians

 Mental Health Workers Substance Abuse Counselors •Doctors •Nurses Teachers •Disaster Relief Workers •Nutritionists Lab Technicians •Librarians Communication Security & Enforcement / **Health Police**

Definition of Evidence-Based Public Health

"the conscientious, explicit, and judicious use of current best evidence in making decisions about the care of communities and populations in the domain of health protection, disease prevention, health maintenance and improvement."

Source:

Jenicek M. Epidemiology, evidenced-based medicine, and evidence-based public health. J Epidemiol. Dec 1997;7(4):187-197.

Components of EBPH

- making decisions on the basis of the best available scientific evidence
- using data and information systems systematically
- applying program-planning frameworks
- engaging the community in decision making
- conducting sound evaluation
- disseminating what is learned
- Source: Brownson, Ross C., Jonathan E. Fielding, Christopher M. Maylahn, "Evidence-Based Public Health: A Fundamental Concept for Public Health Practice" Annual Review of Public Health 2009 30, 175-201

Audience of EBPH

- public health practitioners
- policy makers at local, regional, state, national, and international levels
- stakeholders affected by intervention
- researchers on population health issues
- Source: Brownson, Ross C., Jonathan E. Fielding, Christopher M. Maylahn, "Evidence-Based Public Health: A Fundamental Concept for Public Health Practice" Annual Review of Public Health 2009 30, 175-201

Evidence-Based Practice

- Requires integrating practitioner expertise with the best evidence from systematic research.
- Involves finding and selecting resources that are credible, relevant, and applicable to practice.

Process of Evidence-Based Practice

- 1. Define the problem: convert information needs into focused questions.
- 2. Find the best evidence from the literature.
- 3. Critically appraise the evidence for validity and relevance.
- 4. Apply the evidence to practice.
- 5. Evaluate the results.

Sackett DL, Rosenberg WM. The need for evidence-based medicine. *J R Soc Med.* Nov 1995;88(11):620-624.

Sibbald WJ. Some opinions on the future of evidence-based medicine. Crit Care Clin. 1998;14(3):549-558.

Why Evidence-Based Practice?

- •So much information, too little time
- Need high quality, filtered information to make informed decisions
- Value of scientific knowledge
- for decision making

•Decisions should not be based only on intuition, opinion or anecdotal information

Evidence for Public Health Practice and Policy Decisions

"I make a lot of decisions about how money is going to be spent, and I would like to always be able to back it up and say that this is proven, or evidence-based."

Politicians need evidence to make decisions about public health programs.

Evidence-Based Public Health

Adapted from Jenicek M. Epidemiology, evidenced-based medicine, and evidence-based public health. J Epidemiol. 1997;7:187-97

Evidence Pyramid

From: The Medical Research Library of Brooklyn, http://servers.medlib.hscbklyn.edu/ebm/2100.htm

Sources of Public Health Evidence

- Journal literature
- Books
- Conference proceedings & abstracts
- Dissertations & theses
- Unpublished scientific papers
- Government reports
- Policy statements, laws & regulations

- Surveillance data
- Newsletters
- Teleconferences & webcasts
- Alert systems
- Email discussion lists
- Internet sources
- Consensus conferences
- Expert knowledge & opinion

Benefits of EBPH

- access to more and higher-quality information on what works
- higher likelihood of successful programs and policies being implemented
- greater workforce productivity
- more efficient use of public and private resources
- Source: Brownson, Ross C., Jonathan E. Fielding, Christopher M. Maylahn, "Evidence-Based Public Health: A Fundamental Concept for Public Health Practice" Annual Review of Public Health 2009 30, 175-201

PubMed Health Services Research (HSR) Queries

PubMed Health Services Research (HSR) Queries

This page provides specialized PubMed searches on healthcare quality and costs.

After running one of these searches, you may further refine your results using PubMed's Limits feature.

Results of searches on this page are limited to specific health services research areas (see <u>definitions</u>). For comprehensive searches, use <u>PubMed</u> directly.

Additional PubMed search filters are available, including a filter for Systematic Reviews.

Search by HSR Study Category

This search finds citations that correspond to a specific health services research study category. The search may be either broad and sensitive or narrow and specific. The search filters are based on the work of <u>Haynes RB et al</u>. See the <u>filter table</u> for details.

5. Exploring Implementation and Fidelity of Evidence-Based Behavioral Interventions for HIV Prevention: Lessons Learned from the Focus on Kids Diffusion Case Study (EJ841441)

Author(s): Galbraith, Jennifer S.; Stanton, Bonita; Boekeloo, Bradley; King, Winifred; Desmond, Sharon; Howard, Donna; Black, Maureen M.; Carey, James W.

Source: Health Education & Behavior, v36 n3 p532-549 2009

Descriptors:

Acquired Immunodeficiency Syndrome (AIDS); Intervention; Prevention; Sexually Transmitted Diseases; Public Health; Telephone Surveys; Technical Assistance; Case Studies; Health Education

Abstract:

Evidence-based interventions (EBIs) are used in public health to prevent HIV infection among youth and other groups. EBIs include core elements, features that are thought to be responsible for the efficacy of interventions. The authors evaluate experiences of organizations that adopted an HIV-prevention EBI, Focus on Kids (FOK), and their fidelity to the intervention's eight core elements. A cross-sectional telephone survey was administered to 34 staff members from organizations that had previously implemented FOK. Questions assessed how the organization adhered to, adapted, dropped, or altered the intervention. None of the organizations implemented all eight core elements. This study underscores the importance for HIV intervention researchers to clearly identify and describe core elements. More effort is needed to reflect the constraints practitioners face in nonresearch settings. To ensure intervention effectiveness, additional research and technical assistance are needed to help organizations implement HIV prevention EBIs with fidelity. (Contains 3 tables.) **_Hide Full** <u>Abstract</u>

 Image: Contract of the state of the sta

In an effort to assist the thousands of aid workers in Haiti responding to the aftermath of the January earthquake, K4Health has initiated the development of the Haiti Relief Toolkit which provides international and local relief workers with access to a technical resource package of key tools and materials from leading organizations.

- Coverage
 - AGRICOLA (AGRICultural OnLine Access) is a bibliographic database of citations to the agricultural literature created by the National Agricultural Library (NAL) and its cooperators. Database covers materials in all formats, including printed works from the 15th century. The records describe publications and resources encompassing all aspects of agriculture and allied disciplines, including food and human nutrition.
 - You may search the National Agricultural Library Catalog and Journals Database at the same time.

Practicing EBPH

Define the public health problem

Convert the information needs into focused questions

Search and find the best evidence

Critically appraise the evidence for **relevance** and *validity*

Objectives – Critical Appraisal I

By the end of this section, you should be able to...

- Pick out key information from unstructured and structured abstracts using the PICO model.
- Compare the population and intervention you wish to study with that addressed by the article using the PICO model to ascertain relevance.
- Identify the type of study described in two abstracts and suggest validity indicators

Scenario – Knowledge Need

- You work at a district public health office and you are considering reaching out to the public in your area with an intervention to promote fruit and vegetable consumption for prevention of chronic diseases.
- Is there any evidence whether this approach could work?

Introduction to PICO

The PICO framework can be used to structure your search question and appraise the relevance of results to your knowledge need.

- **P** = Population, Problem, Patient
- I = Intervention or Item of Interest

(program or treatment or screening test or exposure or prognostic factor)

- **C** = Comparison or Control (if any)
- **O** = Outcomes

PICO for Scenario

- P = The public in an urban area at risk of chronic disease
- I = Promotion of fruit and vegetable consumption
- C = Standard practice/Existing promotions
- O = Participation in program (process evaluation); Increased fruit and vegetable consumption (outcome evaluation); Prevention of chronic disease (long-term
 - outcome evaluation)

Critical Appraisal

- Does the item address the question? [Are the population and intervention similar enough to be useful?]
- Is this item quality evidence?
- Always better to appraise full-text
- Realistically, most make the first cut by appraising the abstract (or executive summary)

Structured Abstract Components

- Background or Objectives (also Context, Aim)
- Methods
 - More specifically: Design, Setting, Participants, Population, Intervention or Exposure, Main Outcome Measures
- Results (also Findings)
- Conclusions (also Interpretation)
 - Sometimes followed by Discussion or Limitations

Paper with Unstructured Abstract

Baker AH, Wardle J.

Increasing fruit and vegetable intake among adults attending colorectal cancer screening; the efficacy of a brief tailored intervention.

Cancer Epidemiology Biomarkers and Prevention 2002 Feb; 11(2): 203-206

Health Behavior Unit, Department of Epidemiology and Public Health, University College London, London, WC1E 6BT, United Kingdom.

Unstructured Abstract

Fruits and vegetables appear to confer protection against several cancers, but most adults in the United Kingdom eat substantially less than the recommended amounts. Cancer screening services could provide a valuable context in which to provide advice on increasing fruit and vegetable intake. This study examined the efficacy of a brief, tailored, psycho-educational intervention for increasing fruit and vegetable intake, carried out in a cancer screening clinic. The study was a randomized, controlled trial. 742 participants, 55-64 years of age, recruited from three cancer screening clinics, completed a baseline questionnaire. They were assigned either to the tailored intervention group or to an untreated control group. The primary outcome measure was self-reported consumption of fruit and vegetables. At 6 week follow-up there were significant increases in daily servings of fruit and vegetables in the tailored intervention group (CI, 0.87-1.25) compared with the untreated group (CI, 0.08-0.43). These results support the efficacy of a simple, written message, which is tailored to the intake and knowledge levels of the individual, for modifying cancer-protective dietary behaviors, at least in the short term. They also suggest that cancer screening clinics may be a good context for providing this service.

Unstructured Abstract

Fruits and vegetables appear to confer protection against several cancers, but most adults in the United Kingdom eat substantially less than the recommended amounts. Cancer screening services could provide a valuable context in which to provide advice on increasing fruit and vegetable intake. This study examined the efficacy of a brief, tailored, psycho-educational intervention for increasing fruit and vegetable intake, carried out in a cancer screening clinic. The study was a randomized, controlled trial. 742 participants, 55-64 years of age, recruited from three cancer screening clinics, completed a baseline questionnaire. They were assigned either to the tailored intervention group or to an untreated control group. The primary outcome measure was self-reported consumption of fruit and vegetables. Discussion Questions

- Does the paper PICO match your scenario PICO in terms of population and intervention and outcomes?
- What type of study is it?
- Is this intervention effective?
- What else have you learned from reading this abstract?
- Would you read this entire paper? Why or why not?

Paper with Structured Abstract

Block G, Wakimoto P, Metz D, Fujii ML, Feldman N, Mandel R, Sutherland B.

- A randomized trial of the Little by Little CD-ROM: demonstrated effectiveness in increasing fruit and vegetable intake in a low-income population.
- Prev Chronic Dis. 2004 Jul;1(3):A08. Epub 2004 Jun 15.

Public Health Nutrition Program, School of Public Health, University of California, Berkeley 94720, USA. gblock@berkeley.edu

Analyzing a Structured Abstract

- Look in key components for information
- Some information will not be presented in the abstract – decide whether to read on in the paper
- Background
 - What is the setting for this study?
 - What is the rationale for the study?

Background

INTRODUCTION: Research indicates that low fruit and vegetable intake is a risk factor for many chronic diseases. Despite large-scale education campaigns, the great majority of Americans do not consume recommended levels. We tested the ability of a single brief interactive experience of the Little by Little CD-ROM to increase fruit and vegetable intake in low-income women.

Analyzing a Structured Abstract

- Methods
 - What type of study is it?
 - Who participated in the study?
 - What was the intervention?
 - What outcomes were measured and how?
- Use the information from this section to create a PICO for this article
- Does the PICO sufficiently match your scenario? If not, stop here. It's not relevant to your question.
Methods

• METHODS: A randomized placebo-controlled, parallel-group trial included 481 low-income, female participants: mean age 50.1 years, 48.4% African American, 51.6% non-Hispanic white, and 92.5% below 185% of the federally designated poverty level. Participants received one of three conditions: 1) a one-time experience with the Little by Little CD-ROM, 2) the Little by Little CD-ROM plus two reminder telephone calls, or 3) a stress management CD-ROM (control condition). We assessed baseline and follow-up dietary intake with a modified 24-hour recall.

Analyzing a Structured Abstract

• Look in **Results** for information

- What percentage participated?
- Was the intervention effective?
- What types of analyses were done?
- Was follow-up sufficient?

Results

• RESULTS: Two months after the one-time experience with the CD-ROMs, both intervention groups reported significantly higher intakes of fruits and vegetables than the control group. The Little by Little group with reminder calls increased daily intake by 1.32 fruits/vegetables, an 86% greater increase than the control group (P = .016). The Little by Little group without reminder calls increased daily intake by 1.20 fruits/vegetables, a 69% greater increase than the control group (P = .052). Significantly greater movement in Stage of Readiness for Change also occurred in the Little by Little groups compared with the control group.

Analyzing a Structured Abstract

• Look in **Conclusions** for information

- Were all important outcomes considered?
- Are the likely intervention benefits worth the potential harms and costs?

Conclusions

• CONCLUSION: The Little by Little CD-ROM may be useful in public health and clinical situations to increase fruit and vegetable intake.

Discussion Questions

- Did the paper PICO match your scenario PICO in terms of population and intervention and outcome?
- What could you tell about validity from the results?
- What have you learned from reading this abstract?
- Would you read this entire paper? Why or why not?

Objectives

Are you able to...

- Pick out key information from the main areas of an unstructured and a structured abstract using the PICO model.
- Identify the type of study described in abstracts
- Use the PICO model to compare the population and intervention and outcomes you are interested in with those reported in an article.

Questions or Comments?

Later in this workshop we will analyze an entire paper.

Sample Case Exercise

 The Health Promotion-Disease Prevention division is working with community-based organizations to reduce smoking in the 50+ population. All sorts of interventions have been proposed, some general and some targeted. A smoke free public places law is starting on the books this fall since those have been generally successful nationwide. Is there evidence that law would be sufficient to reduce older adult smoking?

Background Questions

• General (things you need to know):

– How much smoking by older adults is done in public places as opposed to homes, etc.?

- Location/agency-specific
 - What is your current prevalence of smokers aged 50+?

PICO the Case

- P (Population or Patient or Problem): smokers over age 50
- I (Intervention or Test or Prognostic Factor or Risk Factor): smoke free law
- C (Comparison, if one): no smoke free law
- O (Outcome(s)): reduction in smoking overall by this population

Searchable Foreground?

- Using the PICO to create a searchable question along the lines of the following:
- In the Patient Population with this Problem, does the Intervention more than the Comparison (if any) result in the Outcomes.

• In older adult (50+) smokers, will smoke-free laws reduce smoking?

Identify Database(s) and Terms

• Browse list of databases and suggest at least three possibilities.

• What terms will you use? Why?

• Let's search one of the free databases together.

CASE STUDIES/SAMPLE SEARCHES

- Form groups of 2 or 3 members.
- Select one case study question (have alternates in case your choice is taken by another group).
- Task: prepare and present an analysis of the information needed using the worksheet.
- Your group will have _____ minutes to collaborate on completing the worksheet.

Together you will:

- Formulate background questions
- Break the case into the PICO model
- Generate a searchable foreground question
- For that foreground question, you will:
 - Identify a few relevant resources/databases
 - Suggest search terms
 - Choose one of the databases available at the session in which to execute a strategy
 - Execute the strategy and locate relevant content

FEEDBACK

- Each group will share its investigation with the class
- Sharing will include demonstrating one resource searched even if not successful
- Class will provide other suggestions to group
- At the end of the class, participants will receive a handout with sample strategies and teaching points for all the case studies.

About Evidence-Based Practice for Public Health

Evidence-based practice for public health involves using the best available evidence to make informed public health practice decisions. This website provides free online access to evidence-based public health (EBPH) resources, <u>knowledge</u> <u>domains of public health</u>, and public health journals and <u>databases</u>. The resources are arranged along a pathway of evidence to allow public health practitioners to easily find and use the best evidence to develop and implement effective interventions, programs, and policies.

About

The Pathway to Evidence-Based Resources

Evidence-Based Guidelines

Evidence-based guidelines based on a systematic review of the research literature. The guidelines provide summaries of evidence and recommendations for practice from government agencies, professional organizations, and convening expert panels.

Systematic Reviews

Systematic reviews and meta-analyses of the literature that use specific methods and criteria to locate, appraise, and synthesize the evidence from research studies. The reviews uncover the strengths and weaknesses of the evidence and identify gaps in current research.

Pre-Formulated and Filtered Searches of Published Studies

Specialized searches of PubMed/MEDLINE on specific public health topics or limited to studies that correspond to a specific research category.

Best Practices

Public health programs, interventions, and policies that through experience have been evaluated, shown to be successful, and have the potential to be adapted and transformed by others working in the same field.

Guide to Community Preventive Services

- Resource type: <u>Evidence-Based Guidelines</u>
- Access (free): <u>http://www.thecommunityguide.org</u>
- Coverage:
 - Evidence-based recommendations for specific population-based health interventions
 - Based on a systematic reviews of more than 200 interventions
 - Includes recommendations and summaries, full-text systematic reviews, and supporting materials
- Produced by:
 - Task Force of Community Preventive Services & CDC

Guide to Community Preventive Services http://www.thecommunityguide.org

What is the Community Guide?

GUIDE TO

COMMUNIT Preventive Services -

The Guide to Community Preventive Services is a free resource to help you choose programs and policies to improve health and prevent disease in your community. Systematic reviews are used to answer these questions:

- · Which program and policy interventions have been proven effective?
- Are there effective interventions that are right for my community?
- What might effective interventions cost; what is the likely return on investment?

More than 200 interventions have been reviewed and the Task Force on Community Preventive Services has issued recommendations for their use. Learn more about the guide, our systematic review methods, and the Community Guide team.

Community Guide Systematic Reviews

Obesity Prevention: Interventions in Community Settings

Reviewed interventions include programs designed to reduce screen time, technology-based strategies, and interventions specific to worksite and school settings.

Task Force Recommendations & Findings

This table lists interventions reviewed by the Community Guide, with Task Force findings for each (<u>definitions of findings</u>). Click on an underlined intervention title for a summary of the review, and where available, <u>Research-tested Intervention</u> (s).

Programs (RTIPs).

Interventions to reduce screen time (e.g., time in front of a TV, computer monitor)					
Behavioral interventions to reduce screen time	Recommended				
Mass media interventions to reduce screen time	Insufficient Evidence				
Technology-supported interventions (e.g., computer or web applications)					
Multicomponent counseling or coaching to effect weight loss Recommended					
Multicomponent counseling or coaching to maintain weight loss	Recommended				
Interventions in specific settings					
Worksite programs to control overweight and obesity	Recommended				
School-based programs to prevent overweight and obesity	Insufficient Evidence				

Worksite Programs to Control Overweight and Obesity

Worksite nutrition and physical activity programs are designed to improve health-related behaviors and health outcomes. These programs can include one or more approaches to support behavioral change including informational and educational, behavioral and social, and policy and environmental strategies.

Task Force Recommendations & Findings

The <u>Task Force on Community Preventive Services recommends</u> worksite programs intended to improve diet and/or physical activity behaviors based on strong evidence of their effectiveness for reducing weight among employees.

About The Intervention

- Informational and educational strategies aim to increase knowledge about a healthy diet and physical activity. Examples include:
 - Lectures
 - Written materials (provided in print or online)
 - Educational software
- Behavioral and social strategies target the thoughts (e.g. awareness, self-efficacy) and social factors that effect behavior changes. Examples include:
 - Individual or group behavioral counseling
 - Skill-building activities such as cue control
 - Rewards or reinforcement
 - Inclusion of co-workers or family members to build support systems
- Policy and environmental approaches aim to make healthy choices easier and target the entire workforce by changing physical or organizational structures. Examples of this include:
 - Improving access to healthy foods (e.g. changing cafeteria options, vending machine content)
 - Providing more opportunities to be physically active (e.g. providing on-site facilities for exercise)
- Policy strategies may also change rules and procedures for employees such as health insurance benefits or costs or money for health club membership.

The Effectiveness of Worksite Nutrition and Physical Activity Interventions for Controlling Employee Overweight and Obesity

A Systematic Review

Laurie M. Anderson, PhD, MPH, Toby A. Quinn, MPA, Karen Glanz, PhD, MPH, Gilbert Ramirez, DrPH, Leila C. Kahwati, MD, MPH, Donna B. Johnson, PhD, Leigh Ramsey Buchanan, PhD, W. Roodly Archer, PhD, Sajal Chattopadhyay, PhD, Geetika P. Kalra, MPA, David L. Katz, MD, Task Force on Community Preventive Services

Abstract: This report presents the results of a systematic review of the effectiveness of worksite nutrition and physical activity programs to promote healthy weight among employees. These results form the basis for the recommendation by the Task Force on Community Preventive Services on the use of these interventions. Weight-related outcomes, including weight in pounds or kilograms, BMI, and percentage body fat were used to assess effectiveness of these programs.

This review found that worksite nutrition and physical activity programs achieve modest improvements in employee weight status at the 6–12-month follow-up. A pooled effect estimate of -2.8 pounds (95% CI=-4.6, -1.0) was found based on nine RCTs, and a decrease in BMI of -0.5 (95% CI=-0.8, -0.2) was found based on six RCTs. The findings appear to be applicable to both male and female employees, across a range of worksite settings.

Most of the studies combined informational and behavioral strategies to influence diet and physical activity; fewer studies modified the work environment (e.g., cafeteria, exercise facilities) to promote healthy choices. Information about other effects, barriers to implementation, cost and cost effectiveness of interventions, and research gaps are also presented in this article. The findings of this systematic review can help inform decisions of employers, planners, researchers, and other public health decision makers.

Healthy Weight

Overweight and Obesity

Division of Nutrition, Physical Activity and Obesity

LEADING EMPLOYEES TO ACTIVITY AND NUTRITION In 2008, the annual healthcare cost of obesity in the US was estimated to be as high as 147 billion dollars a year.¹ The annual medical burden of obesity increased to 9.1 percent in 2006 compared to 6.5 percent in 1998.¹ Medical expenses for obese employees are estimated to be 42 percent higher than for a person with a healthy weight.¹ Workplace obesity prevention programs can be an effective way for employers to reduce obesity and lower their health care costs, lower absenteeism and increase employee productivity.

What is the cost of obesity to your organization?

"CDC's LEAN Works! Leading Employees to Activity and Nutrition" is a FREE web-based resource that offers interactive tools and evidence-based resources to design effective worksite obesity prevention and control programs, including an obesity cost calculator to estimate how much obesity is costing your company and how much savings your company could reap with different workplace interventions.

Be the first to benefit! Get started with CDC's LEAN Works! today by choosing one of the stages below.

Abstract:

Objective: This review seeks to examine the effectiveness of school-based programs for reducing childhood overweight or obesity.Methods and

Procedures: A systematic review of the research literature published since 1990 was conducted to identify experimental or quasi-experimental school-based curricular or environmental preventive interventions, with evaluation >/=6 months after baseline, which reported outcomes in terms of a measure of overweight.

Results: Fourteen studies were identified, including one involving a nutrition-only program, two physical activity promotion interventions and eleven studies combining nutrition and physical activity components. Most studies (n = 10) offered weak (grade 2) quality evidence. One study offered strong (grade 4) evidence reducing the odds ratio for overweight in girls only, while four grade 2 studies reported significant improvements in BMI or at-risk-for overweight or overweight prevalence in boys, girls, or both. Twelve studies reported significant improvement in at least one measure of dietary intake, physical activity, and/or sedentary behavior.

Discussion: Our ability to draw strong conclusions as to the efficacy of school-based obesity prevention programs is limited by the small number of published studies and by methodological concerns. Qualitative analysis suggests programs grounded in social learning may be more appropriate for girls, while structural and environmental interventions enabling physical activity may be more effective for boys. High-quality evaluation protocols should be considered essential components of future programs.

Address: Vanderbilt Center for Evidence-based Medicine, Nashville, Tennessee, USA.

About Evidence-Based Practice for Public Health

Evidence-based practice for public health involves using the best available evidence to make informed public health practice decisions. This website provides free online access to evidence-based public health (EBPH) resources, <u>knowledge</u> <u>domains of public health</u>, and public health journals and <u>databases</u>. The resources are arranged along a pathway of evidence to allow public health practitioners to easily find and use the best evidence to develop and implement effective interventions, programs, and policies.

Health Statistics

http://phpartners.org/health_stats.html#Health%20Statistics

- <u>America's Health Rankings</u> (United Health Foundation) America's Health Rankings is a yearly
 assessment of the relative healthiness of the nation, based upon analysis of comprehensive
 determining factors such as personal behaviors, the environment in which people live and work, the
 decisions made by public and elected officials and the quality of medical care delivered by health
 professionals.
- <u>Big Cities Health Inventory 2007: The Health of Urban USA</u> (National Association of County and City Health Officials (NACCHO)) - Provides city-to-city comparisons of leading measures of health, presenting a broad overview of the health of the 54 largest metropolitan areas in the U.S.
- <u>Cancer Trends Progress Report</u> (National Cancer Institute, NIH (NCI)) Summarizes progress in the U.S. against cancer in relation to Healthy People 2010 targets set forth by the Department of Health and Human Services. The report includes key measures of progress along the cancer control continuum and uses national trend data to illustrate where advancements have been made.
- CDC Data and Statistics (Centers for Disease Control and Prevention (CDC))
- Data & Surveys (Agency for Healthcare Research and Quality (AHRQ))
- <u>Demographic, Social and Housing Statistics</u> (United Nations)
- European Health For All Database (HFA-DB) (World Health Organization (WHO)) Contains data on about 600 health indicators for Member States of the WHO European Region, including basic demographic and socioeconomic indicators; lifestyle- and environment-related indicators; mortality, morbidity and disability; hospital discharges; and health care resources, utilization and expenditure. The database is a helpful tool for international comparison and for assessing the health situation and trends in any European country in an international context.
- FASTATS A-Z (Centers for Disease Control and Prevention (CDC)) Listing and quick links for basic public health statistical data.
- Finding and Using Health Statistics: A Self-Study Course (National Library of Medicine, National Information Center on Health Services Research and Health Care Technology) - Slide Presentation, October 2000
- <u>GlobalHealthFacts.org</u> (Henry J. Kaiser Family Foundation (KFF)) Global data on HIV/AIDS, malaria, TB and other key health and socio-economic indicators. The data are displayed in tables, charts, and color-coded maps and can be downloaded for custom analyses.

CASE STUDIES – PART II

- Consider your search cases again in light of these new resources
- Try out a few possibilities to add to your case solution
- We'll come together in a few minutes to hear reports back from all the groups
- Each group will have 3-5 minutes to share and get feedback from other participants.

CRITICAL APPRAISAL II – FULL TEXT

Prochaska JD, Burdine JN, Bigsby K, Ory MG, Sharkey JR, McLeroy KR, et al.

The impact of a communitywide smoke-free ordinance on smoking among older adults.

Prev Chronic Dis 2009;6(1): .

http://www.cdc.gov/pcd/issues/2009/jan/07_ 0264.htm

CRITICAL APPRAISAL - Validity

I. Are the results of the study valid?

- Were there clearly identified comparison groups that were similar with respect to important determinants of outcome, other than the one of interest (exposure to smoke free legislation)?
- Were the outcomes and exposures measured in the same way in the groups being compared?
- Was follow-up sufficiently long and complete?
CRITICAL APPRAISAL

II. What are the results?

 How strong is the association between exposure and outcome (harm studies) OR between intervention and outcome?
ODDS RATIO (Observational Studies)

• How precise is the estimate of the risk? CONFIDENCE INTERVALS

CRITICAL APPRAISAL - ACTION

III. Will the results help to improve the health of my community?

 Can the results be applied to caring for people in the community? Are the findings generalizable?

• What is the magnitude of the risk or benefit?

Wrap-up & Evaluation
